

ABSTRACT OF THE DISCLOSURE

In the case of forwarding data received via a circuit by electronic mail, it is possible to forward it to a plurality of forwarding destinations. In that case, it is possible to register a format on forwarding for each forwarding destination. For instance, when attaching received images to the electronic mail, whether to attach all the images or just one page, and an image format for the sake of attachment can be registered. In addition, it is possible, in the case where the data is received based on the ITU-T T. 37 recommendation, to register whether to delete an attachment file received and transmit only the text, transmit only the attachment file or transmit both the text and the attachment file. Moreover, a forwarding method in the case where the forwarding destination is a mobile terminal can also be registered.
